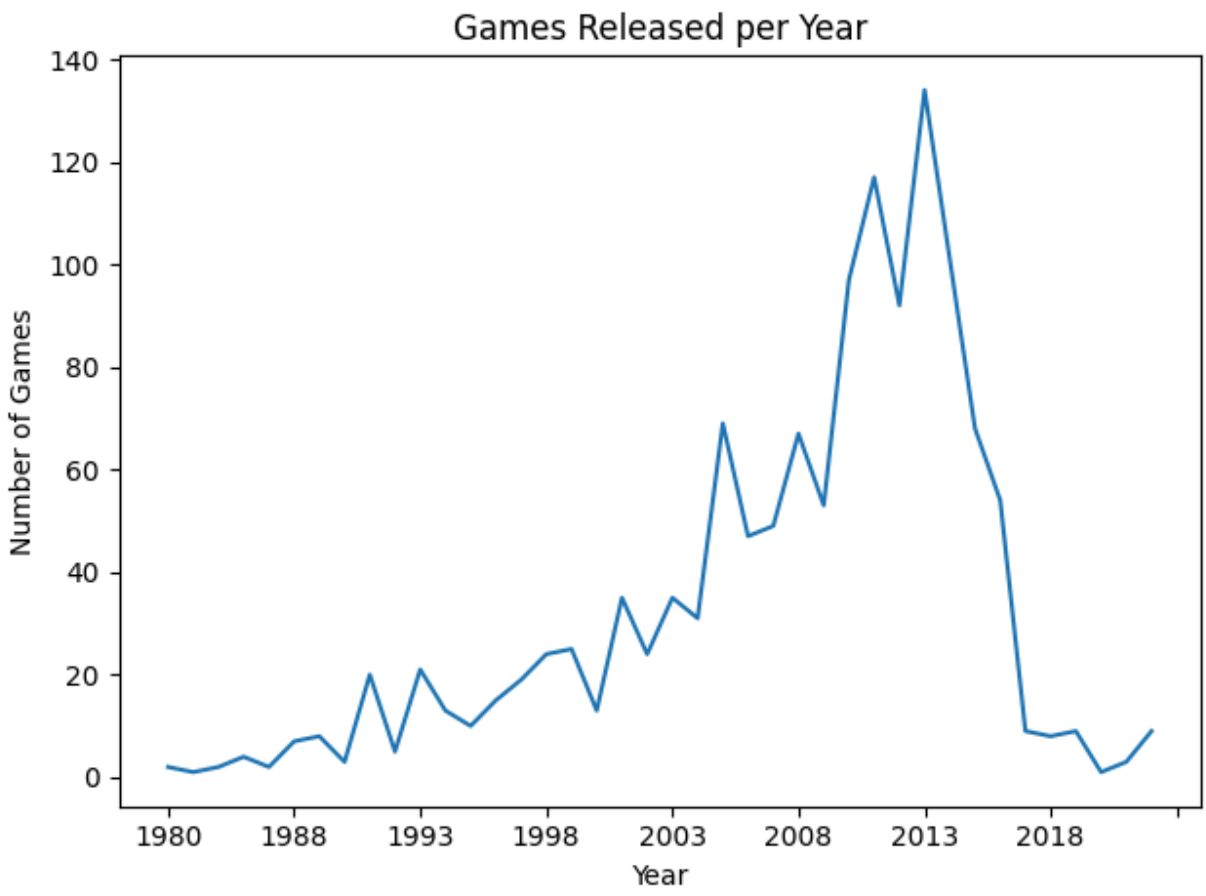
SALES & PERFORMANCE ANALYSIS

1.Games Released Per Year (games_per_year)

Report:

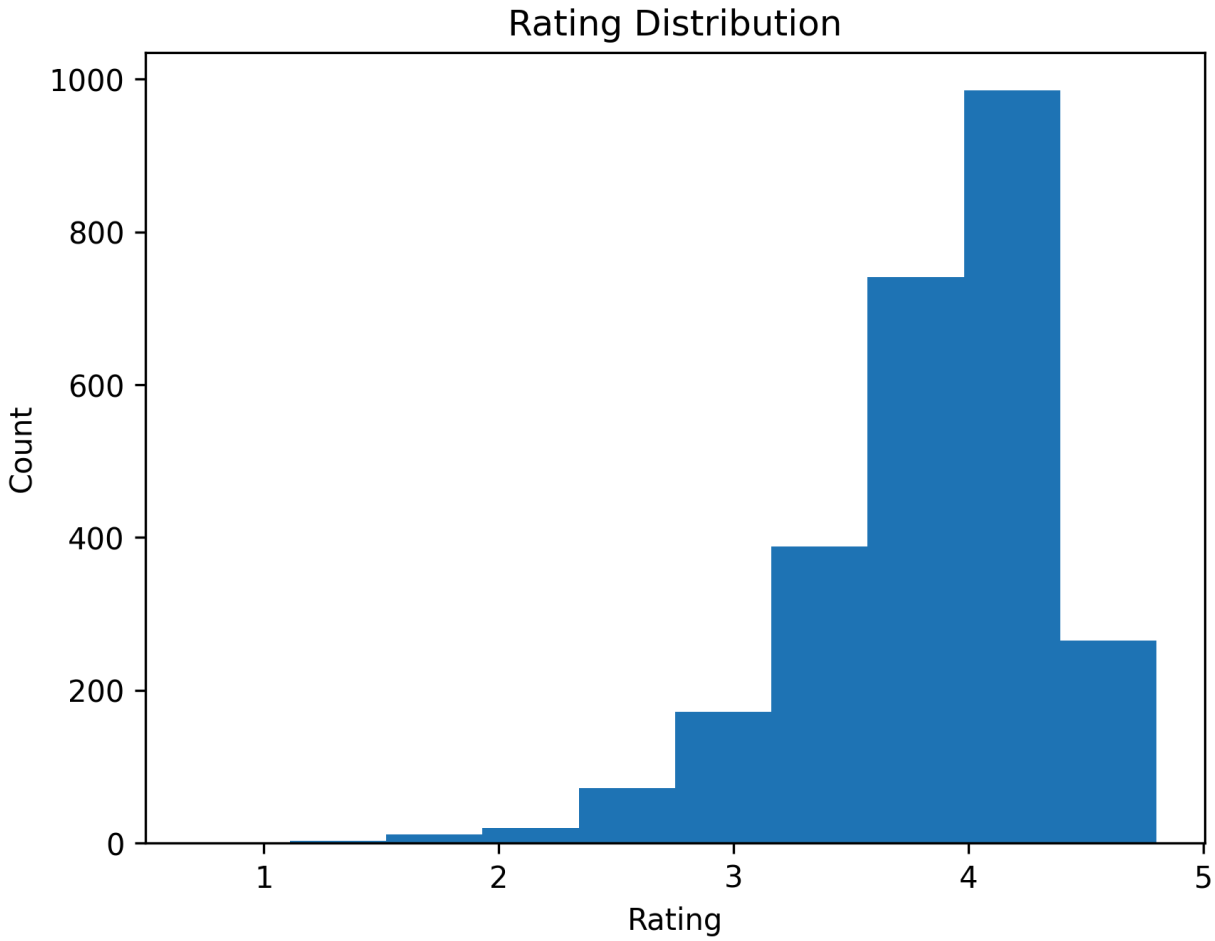
The number of games released increased steadily over time before declining in recent years. This indicates a growth phase followed by market saturation or industry shift.

Business Insights: the Company should analyze market Trends before increasing production volume.



2. Rating Distribution (rating_distribution)

Report:Most games fail within the 3.0 - 4.0 rating range, showing generally positive user reception.



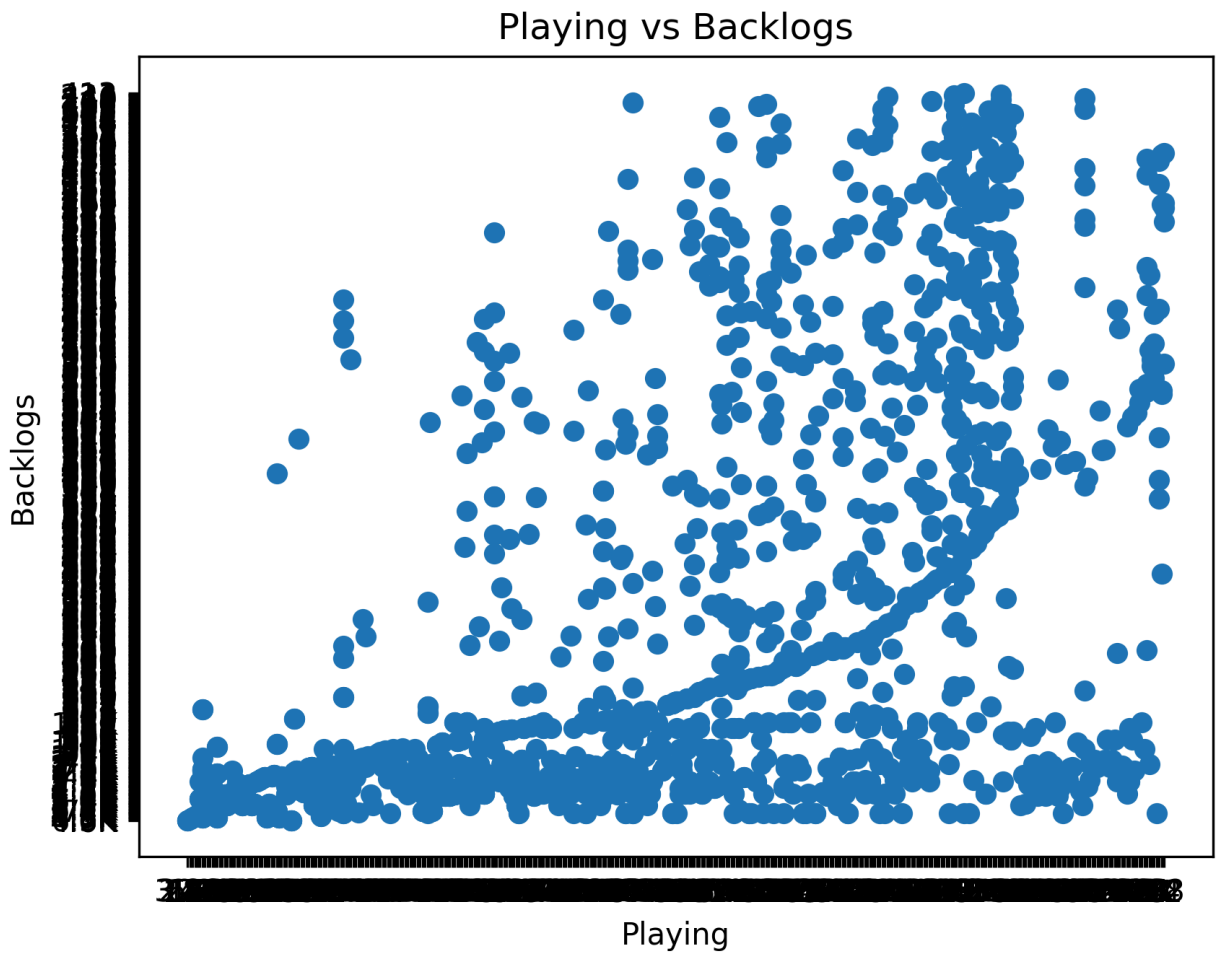
Business Insights:

maintaining ratings above 3.5 can significantly improve revenue performance.

3. Playing vs Backlogs.

Report:

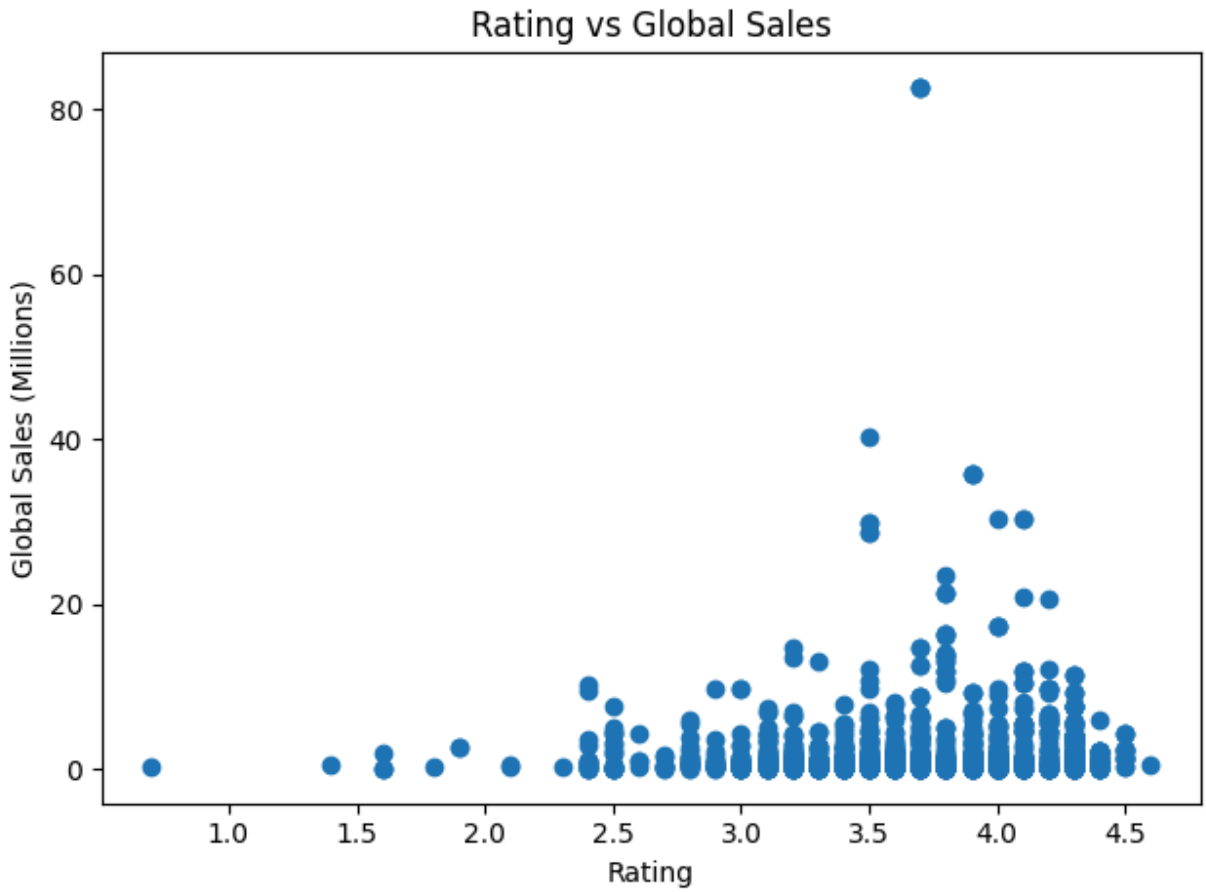
There is a noticeable gap between games currently being played and games added to backlogs, indicating that many users purchase games but do not actively play all of them.



Business insights:
Developers should focus on improving engagement strategies to convert backlog games into active plays.

4. Rating vs Global Sales

Report:
Higher - rated games tend to achieve significantly higher global sales, indicating a strong positive correlation between rating and revenue.

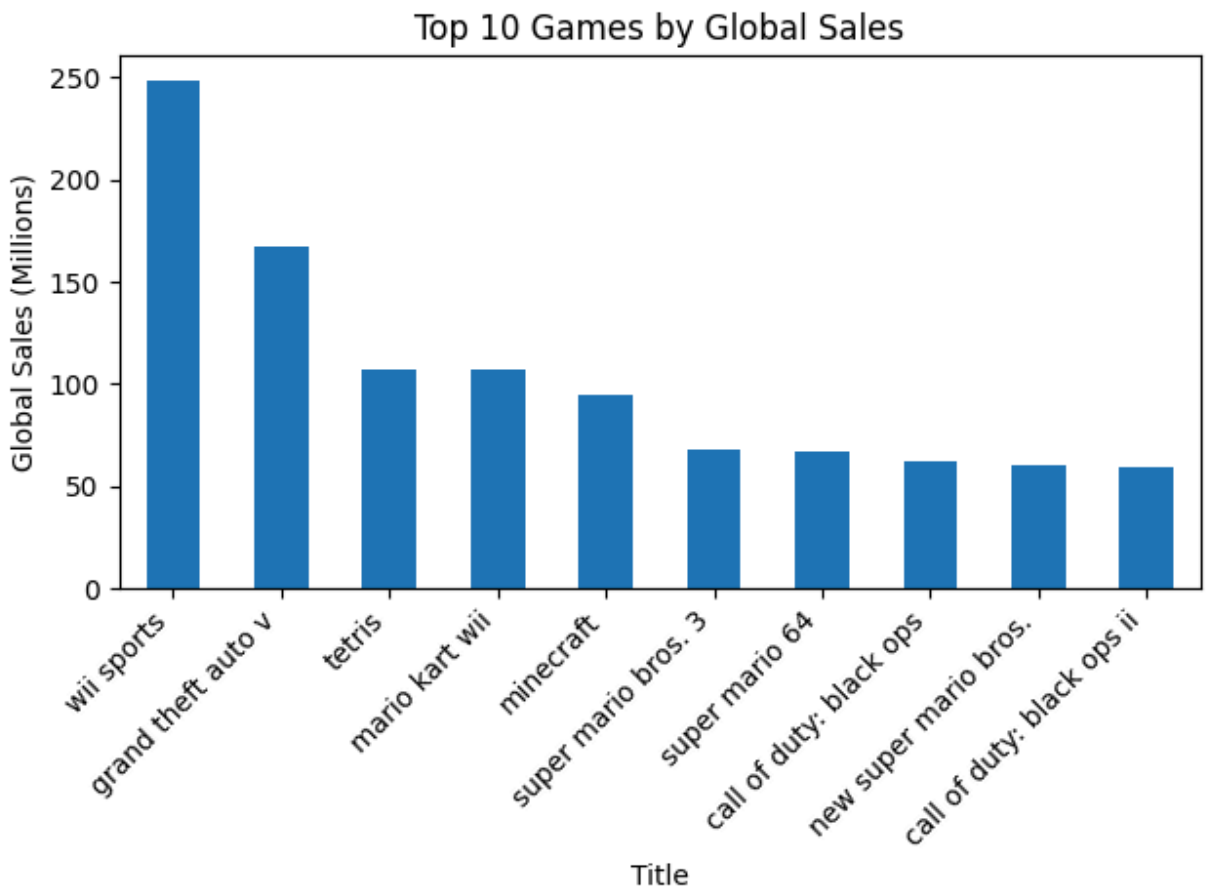


Business insights:
Improving game quality and user satisfaction can directly increase sales performance.

5. Top 10 Games by Global Sales

Report:

A small number of blockbuster games generate a large share of total revenue.



Business insights:
Franchise-based games and sequels can provide consistent high returns.
